## **Geomorphology and Plate Tectonics** David M. Ferrari

Geomorphology is the scientific study of landforms and the processes that shape them whereas plate tectonics specifically describes the large scale motions of Earth's lithosphere. This book presents theory, methodology and applications, as well as studies of specific geographic regions. A model to evaluate the effect of groundwater fluctuations on the development of gullies and hence, on landscape evolution is analysed. The use of cosmogenic nuclides in geomorphology and earth-surface processes is also reviewed and uncertainties and limitations related to current understanding of the physical properties of cosmogenic nuclides are summarised. In addition, this book studies plate tectonics in several regions of the world, including Siberia, Western North America, North Africa, India, and Northwest Australia.
