New to the NMS Clinical Manual series: A concise pocket-sized manual written specifically for medical students on their anesthesia rotation. Written in a structured prose format, the book begins with an introductory overview of the anesthesia process the student is likely to encounter in the form of a clinical case. Various steps and considerations are discussed that involve prescribing, administering and monitoring anesthesia. Internal chapters are skills-based and highly procedural oriented. The final chapter cites a case study that ties together the entire process. It contains only the essential information a student needs to succeed in their brief yet important anesthesia rotation.
