It was long ago that group analysis of differential equations became a powerful tool for studying nonlinear equations and boundary value problems. This analysis was especially fruitful in application to the basic equations of mechanics and physics because the invariance principles are already involved in their derivation. It is in no way a coincidence that the equations of hydrodynamics served as the first object for applying the new ideas and methods of group analysis which were developed by I. V. Ovsyannikov and his school. The authors rank themselves as disciples of the school. The present monograph deals mainly with group-theoretic classification of the equations of hydrodynamics in the presence of planar and rotational symmetry and also with construction of exact solutions and their physical interpretation. It is worth noting that the concept of exact solution to a differential equation is not defined rigorously; different authors understand it in different ways. The concept of exact solution expands along with the progress of mathematics (solutions in elementary functions, in quadratures, and in special functions; solutions in the form of convergent series with effectively computable terms; solutions whose searching reduces to integrating ordinary differential equations; etc.). We consider it justifiable to enrich the set of exact solutions with rank one and rank two invariant and partially invariant solutions to the equations of hydrodynamics.

**From reader reviews:**

**Lee Durfee:**

Now a day people who Living in the era exactly where everything reachable by match the internet and the resources in it can be true or not require people to be aware of each facts they get. How a lot more to be smart in acquiring any information nowadays? Of course the solution is reading a book. Reading a book can help people out of this uncertainty Information specifically this Applications of Group-Theoretical Methods in Hydrodynamics (Mathematics and Its Applications) (Volume 450) book because book offers you rich details and knowledge. Of course the data in this book hundred per cent guarantees there is no doubt in it as you know.

**Jennifer Galaviz:**

In this period of time globalization it is important to someone to find information. The information will make a professional understand the condition of the world. The health of the world makes the information much easier to share. You can find a lot of sources to get information example: internet, newspaper, book, and soon. You can see that now, a lot of publisher that will print many kinds of book. The particular book that recommended for your requirements is Applications of Group-Theoretical Methods in Hydrodynamics (Mathematics and Its Applications) (Volume 450) this guide consist a lot of the information in the condition of this world now. This specific book was represented how can the world has grown up. The terminology styles that writer use for explain it is easy to understand. Often the writer made some research when he makes this book. Honestly, that is why this book acceptable all of you.

**Phillip Chadwick:**

Do you like reading a guide? Confuse to looking for your best book? Or your book has been rare? Why so many problem for the book? But virtually any people feel that they enjoy regarding reading. Some people likes examining, not only science book but in addition novel and Applications of Group-Theoretical Methods in Hydrodynamics (Mathematics and Its Applications) (Volume 450) or perhaps others sources were given information for you. After you know how the truly great a book, you feel would like to read more and more. Science guide was created for teacher or students especially. Those textbooks are helping them to bring their knowledge. In various other case, beside science book, any other book likes Applications of Group-Theoretical Methods in Hydrodynamics (Mathematics and Its Applications) (Volume 450) to make your spare time far more colorful. Many types of book like this.

**Pamela Bost:**

Some individuals said that they feel bored when they reading a book. They are directly felt the idea when they get a half areas of the book. You can choose often the book Applications of Group-Theoretical Methods in Hydrodynamics (Mathematics and Its Applications) (Volume 450) to make your current reading is

interesting. Your personal skill of reading talent is developing when you similar to reading. Try to choose very simple book to make you enjoy you just read it and mingle the feeling about book and reading especially. It is to be very first opinion for you to like to start a book and read it. Beside that the e-book Applications of Group-Theoretical Methods in Hydrodynamics (Mathematics and Its Applications) (Volume 450) can to be your new friend when you're sense alone and confuse with what must you're doing of the time.
