Computational Liquid Crystal Photonics: Fundamentals, Modelling and Applications Salah Obayya, Mohamed Farhat O. Hameed, Nihal F. F. Areed

Optical computers and photonic integrated circuits in high capacity optical networks are hot topics, attracting the attention of expert researchers and commercial technology companies. Optical packet switching and routing technologies promise to provide a more efficient source of power, and footprint scaling with increased router capacity; integrating more optical processing elements into the same chip to increase on-chip processing capability and system intelligence has become a priority.

This book is an in-depth look at modelling techniques and the simulation of a wide range of liquid crystal based modern photonic devices with enhanced high levels of flexible integration and enhanced power processing. It covers the physics of liquid crystal materials; techniques required for modelling liquid crystal based devices; the state-of-the-art liquid crystal photonic based applications for telecommunications such as couplers, polarization rotators, polarization splitters and multiplexer-demultiplexers; liquid core photonic crystal fiber (LC-PCF) sensors including biomedical and temperature sensors; and liquid crystal photonic crystal based encryption systems for security applications.

Key features

- Offers a unique source of in-depth learning on the fundamental principles of computational liquid crystal photonics.
- Explains complex concepts such as photonic crystals, liquid crystals, waveguides and modes, and frequency- and time-domain techniques used in the design of liquid crystal photonic crystal photonic devices in terms that are easy to understand.
- Demonstrates the useful properties of liquid crystals in a diverse and ever-growing list of technological applications.
- Requires only a foundational knowledge of mathematics and physics.

From reader reviews:

Davis Miller:

In this 21st hundred years, people become competitive in each and every way. By being competitive today, people have do something to make all of them survives, being in the middle of the crowded place and notice by means of surrounding. One thing that at times many people have underestimated it for a while is reading. Sure, by reading a e-book your ability to survive enhance then having chance to stay than other is high. To suit your needs who want to start reading some sort of book, we give you this kind of Computational Liquid Crystal Photonics: Fundamentals, Modelling and Applications book as beginner and daily reading e-book. Why, because this book is usually more than just a book.

Carolyn Robles:

As people who live in the modest era should be up-date about what going on or details even knowledge to make them keep up with the era which is always change and progress. Some of you maybe will probably update themselves by studying books. It is a good choice for yourself but the problems coming to a person is you don't know what one you should start with. This Computational Liquid Crystal Photonics: Fundamentals, Modelling and Applications is our recommendation to help you keep up with the world. Why, because this book serves what you want and need in this era.

Lisa Lee:

This Computational Liquid Crystal Photonics: Fundamentals, Modelling and Applications is great publication for you because the content that is full of information for you who have always deal with world and get to make decision every minute. This kind of book reveal it facts accurately using great manage word or we can state no rambling sentences inside it. So if you are read the idea hurriedly you can have whole data in it. Doesn't mean it only provides you with straight forward sentences but challenging core information with lovely delivering sentences. Having Computational Liquid Crystal Photonics: Fundamentals, Modelling and Applications in your hand like keeping the world in your arm, information in it is not ridiculous one particular. We can say that no publication that offer you world inside ten or fifteen moment right but this e-book already do that. So , this is certainly good reading book. Hey there Mr. and Mrs. hectic do you still doubt that?

David Reed:

As a student exactly feel bored to be able to reading. If their teacher expected them to go to the library or make summary for some e-book, they are complained. Just tiny students that has reading's heart or real their leisure activity. They just do what the professor want, like asked to go to the library. They go to right now there but nothing reading seriously. Any students feel that looking at is not important, boring and also can't see colorful pics on there. Yeah, it is to get complicated. Book is very important in your case. As we know that on this era, many ways to get whatever we wish. Likewise word says, ways to reach Chinese's country.

Therefore this Computational Liquid Crystal Photonics: Fundamentals, Modelling and Applications can make you feel more interested to read.
